About Our Testing

DNA is the building block that contains our hereditary material. Previously, scientists thought that our genes were static, however modern research is finding that our bodies can modify the expression of our DNA. Wired For Addiction™ has a custom panel which reviews 69 genes, ranging from genetic variants linked to addiction, methylation defects, mood disorders, psychosocial conditions, inflammation's impact in addiction, etc to help determine the required intervention based on an individual's DNA.

Which Areas Are Covered?

Key Genes related to:

- Mood
- Brain Chemicals
- Methylation
- Inflammation / AutoImmune
- Detoxification

Who Needs This Panel?

Anyone who has or is experiencing:

- Addiction/Dependence
- Co-Occuring Disorders
- Treatment Resistant mental health disorders
- Neurological Issues
- Chronic Relapse

How Genetic Variation Testing Can Help

SNP testing allows patients and their doctors to gain a better understanding of what's happening on a genetic and cellular-level. Completed in 2012, The 1000 Genomes Project and its' accompanying research, allowed the scientific community to identify the physical and functional standpoint of specific gene changes. This project and continuing research has helped scientists and doctors determine which SNPs (variations) are harmful and which are not a concern to your health.

When a patient has SNP testing, clinicians can focus their attention on genetic variations that can lead to poor health and offer the patient guidance in the prevention of health problems or create a protocol to help those with current health problems.

LEGAL DISCLAIMERS: These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

How it works

Kit contents:

- 1x requisition form
- 1x instructions card
- 1x buccal swab
- 1x ID label sticker
- 1x containment bag
- 1x prepaid return shipping bag

Steps:

1. Collect the DNA sample (cheek swab) according to the included instructions.

2. Complete the requisition form and any additional instructions. These items must accompany the sample.

3. Submit the sample and forms to the laboratory via prepaid return shipping bag.

4. Results are provided via online provider portal typically in 5-10 business days after receipt of the sample.
